

Confident with Oxyfresh

As oral healthcare professionals, we are asked every day what products we use and recommend. We would like to introduce and recommend the Oxyfresh products which we now have available in our office.

In a society that places such a heavy emphasis on sparkling white teeth, it's ironic that so many major mouth rinses and toothpastes use dyes to color their products and your teeth! The Oxyfresh products have always been dye-free and alcohol-free to protect one of your greatest assets: your smile. The Oxyfresh mouth rinses and toothpastes are formulated with Xylitol: a natural sweetener found in many fruits and vegetables that has been shown to inhibit the formation of plaque, as well as the bacteria that can lead to tooth decay. The Oxyfresh mouth rinses and toothpastes also contain Oxygene: the proprietary ingredient that dissolves odor-causing microorganisms by attacking volatile sulfur compounds, neutralizing their odorous by-products that cause bad breath and may lead to other serious oral problems.

New research proves that non-alcoholic mouth rinses can pack the same bacterial killing power as those formulated with alcohol. A link is provided on our home page for more information about the Oxyfresh products.
